**Areas of professional special interest**

*Primary Care  
Preventative Care  
Internal Medicine  
Obesity Management  
Occupational Medicine*

## Meet Kim Wickline

*Adult-Geriatric Primary Care Nurse Practitioner*

**Why did you choose health care as a profession?**

I've always found medicine and science fascinating. The ability to combine those with caring for others led me to become a Registered Nurse with a long-term goal of Nurse Practitioner. In 2021, I was able to make that goal a reality by graduating with my master's in science.

**What is your customer service philosophy?**

I always strive to treat my patients with the upmost empathy and respect as possible, the way I would want to be treated. Several years ago, my grandmother was turned away from several primary care offices in her mid-sized town due to her age and dementia diagnosis. I've made it a point to always strive to provide care, to the best of my ability, and accept patients whatever their age and diagnosis are.

**What's one thing you would like to tell every patient or customer?**

Navigating college life is stressful enough without having to worry about being sick or having medications refilled in a new location. I want every patient to feel at ease and welcome in the Wellness Center. To the best of my ability, I will help them in whatever way I can, even if it's just being a familiar face during a stressful day.

**What's the best part about your job?**

The best part of my job is being able to play a small part of and the honor of caring for future generations of healthcare providers.
