APPENDIX J 44
Dissertation Checklist 44

Introduction

This manual provides specific guidelines to be followed in completing the dissertation component of the clinical psychology doctoral program (PhD or PsyD). Although the manual intends to describe the process in a sequential manner, we acknowledge that no document can address every type of problem or dilemma that may arise during the completion of a dissertation project. Nonetheless, by closely following the steps herewith described, we hope to help each student make of their dissertation process a positive and growth-enhancing experience.

The faculty also acknowledges that doctoral dissertations are usually social events that involve many persons within a support system. In addition to the student, the process may involve the dissertation committee and other faculty members, statistical and software consultants, research subjects or participants, typists, editors, among others. These individuals are involved at different stages of the process and are welcome to participate and to assist students with their dissertation project. However, all intellectual contributions and assistance with scientific processes need to be expressly recognized by the student. Ideas borrowed from other writers or other resources must always be acknowledged and properly credited following the latest APA publication guidelines. Intellectual honesty is essential to this process. Consequently, collaboration with any aforementioned party requires that the student exercise personal responsibility and professional integrity at every step.

Our program's philosophy also holds that the dissertation process is an in-depth learning experience through which the student hones many of the scholarly skills and scientific procedures learned throughout their exposure to our academic curriculum. Therefore, the members of the Dissertation Committee assume a mentoring role with the specific mandate of making this learning process as rewarding and pleasant as possible for all involved.

This manual will be modified periodically to accommodate those changes informed by the experience of faculty members and students. Honest feedback about the policies and procedures here presented from all persons involved in dissertation processes will be a crucial component in the continuous efforts towards improving the manual.

I. Objectives

The primary objective of the dissertation process is to ensure the student becomes well-versed in their specific topic of research.

The dissertation is also intended to:

- Enhance the understanding of the student's chosen area of study.
- Provide research experience in a particular area or in developing an action program with the potential for implementation.

- Develop and offer opportunities to demonstrate analytic skills by evaluating data and conclusions within the student's study area.
- Require conducting a comprehensive literature review.
- Demonstrate the student's ability to design and carry out a distinct, original research project that contributes to the study area's theoretical, societal, or practical (clinical or methodological) aspects.
- Facilitate recognition of the fundamental role of ethics in the field of study.
- Develop project planning, time management, organization, and study implementation skills.

II. Types of research

Students from PsyD and PhD programs are encouraged to conduct a research study within a quantitative, qualitative or mixed methodological scope. Examples of types of research are summarized in the following tables:

Quantitative studies	Qualitative studies	Mixed-methods studies
Descriptive Correlational Causal comparative Intervention-type of research: <ul style="list-style-type: none"> • Experimental (controlled) • Quasi-experimental • Pre-experimental Meta-analysis	Basic interpretative research Phenomenological research Grounded Theory Field research (Ethnography) Systematic Literature Review	Combines qualitative and quantitative methods <ul style="list-style-type: none"> • Explanatory sequential • Exploratory sequential • Convergent or concurrent • Nested

Single case studies or multiple case studies	Program development (<i>specific for PsyD students</i>)
Case studies could be conceptualized within a <i>quantitative or a qualitative</i> scope Intervention-type of research to study what treatments work best to improve outcomes	Related to potentially establish a new service or the improvement, expansion, or integration of existing services

III. PhD and PsyD Research-Related Courses

PhD	PsyD
<p>PHS 1621 Descriptive and Inferential Statistics PHS 1622 Psychosocial/Clinical Research Practicum I PHS 1623 Psychosocial/Clinical Research Practicum II PHS 1625 Test Construction PHS 1626 Quantitative Research Methods PHS 1721 Advanced Statistics PHS 1722 Psychosocial/Clinical Research Practicum III/ PHS 1723 Behavioral Neurosciences Research Pract. IV or PHS 1725 Behavioral Neurosciences Research Pract.II PHS 1726 Qualitative Research Methods MPH 5601 Scientific Writing MPH 7101 Seminar IRB PHS 1821 Dissertation Proposal PHS 1826 Doctoral Dissertation Electives PHS 1824 Structural Equation Modeling PHS 1825 Partial Least Squares based Structural Equation Modeling</p>	<p>PSY 6200 Applied Research for Psychologists PSY 6250 Test Construction PSY 6230 Qualitative/Quantitative Methods & Descriptive Statistics PSY 7240 Research Practicum: Data Collection & Data Analysis PSY 7720 Program Development & Administration in Mental Health PSY 8210 Dissertation Proposal PSY 8260 Doctoral Dissertation</p>

For PsyD program:

The *Applied Research for Psychologists (PSY-6200)* course provides the student with the foundation for the development of a preliminary research proposal. Students are encouraged to utilize this opportunity to engage in the initial steps leading to the preparation of the prospectus with which the formal dissertation process begins. As students advance through the sequence of research-oriented courses, they will become equipped to further elaborate on a preliminary research proposal to successfully complete a final dissertation project.

For PhD program:

The *Research Practicums* are designed to provide students with a supervised research experience with a faculty member. Starting with 2022 entering class, students and mentors make a “match” on their mutual research interests and keep working on the selected lab. The practicums will provide the student with the foundation for the development of a preliminary research proposal. Students are encouraged to utilize this opportunity to engage in the initial steps leading to the preparation of the prospectus with which the formal dissertation process begins. As students advance through the sequence of research-oriented courses they will

become equipped to further elaborate on a preliminary research proposal to successfully complete a final dissertation project.

IV. Dissertation Committee selection

Composition

The Dissertation Committee (DC) will have a minimum of two members identified as a *Dissertation Advisor (DA)* and a *Dissertation Reader (DR)*.

Roles and responsibilities of the DC members

The general role of all DC members is to assist each student in producing a scholarly and scientifically sound product. A successful dissertation is meant to be a contribution to science and to society while also serve as a training process where the student hones their professional skills and improves theoretical data base. Therefore, each member is committed to facilitate the dissertation process through their sound and thoughtful advice and is invested in encouraging the student to stay motivated through the learning process inherent to the exercise. A list of the program's faculty and research interests is available in Appendix A.

Dissertation Advisor

The Dissertation Advisor (DA) is the person with the primary responsibility to guide the student through the dissertation process, providing mentoring regarding the topic, assisting the student with questions regarding the process, and assigning the student task to be completed in an autodidactic manner. Students register for the dissertation courses under the name of the DA, who posts the final grade obtained at the end of the study period. The DA is usually knowledgeable in the field that provides the theoretical background for the dissertation or is skilled in the methodological approach needed to address the specific topic of the project. The DA is the one who most closely works with the student in all process phases. The DA should be a faculty member of PHSU. However, a DA from another accredited institution may be permitted if specialized expertise is required or for availability reasons. For PhD students, it is expected that starting with the 2022 entering class, their research mentor assumes the DA role.

The Program Director must authorize the recruitment and acceptance of an external DA. In such cases, the DR will be responsible for overseeing administrative duties of the process, such as those presented in points 1 and 4 below. The Program Director will receive the certification of completion of the dissertation process and post the student's final grade.

In addition to mentoring and overseeing all aspects of the dissertation process, the DA also performs the following duties:

1. Verify that all forms related to the Dissertation Process are completed and filed in the student's departmental record.
2. Approve all relevant aspects of the process, especially of the prospectus, authorization to engage in data gathering by the Internal Review Board (IRB), final

- approval of presentation and certification of completion of the dissertation requirement.
3. Chair all relevant meetings, especially the Dissertation Presentation (Defense) meeting.
 4. Certify, together with the Dissertation Reader, that the dissertation process has been officially concluded and that all requirements have been fully satisfied.

The selection of the DA is made official only after the corresponding form is completed and filed in the student's record. The DA Selection Form may be found in the Appendix B of this manual.

Dissertation Reader

The Dissertation Reader (DR) will collaborate with the DA in assisting the student with the dissertation project. This will include:

1. Reading all portions of the manuscript as they become available to provide feedback and suggestions regarding the content and the scientific procedures conducted during the study.
2. Participation in all formal meetings.
3. Providing input regarding the methodology to be selected for the project.
4. Approval of all relevant aspects of the process, especially of the prospectus, and the final approval of presentation and certification of completion of the dissertation requirement.

The selection of the DR is made official only after the corresponding form is completed and filed in the student's record. The DR Selection Form may be found in Appendix B.

DC and student relationship

A relational mentorship style is considered the ideal approach for the work that a dissertation process entails. Students and their Dissertation Committee members will make every effort to develop an honest, trusting, and empathic interaction.

- ***Committee changes:*** Students are encouraged to remain continuously enrolled throughout the dissertation terms and with the same DC until the dissertation is completed. However, unexpected events could occur in the dissertation process that prompt a student to replace a committee member.
- If a change in the student's DC occurs *after* the proposal defense presentation (adding or changing the DR for example) they must consult the change with the DA and complete the *Request to Change a Committee Member* form (Appendix B).
- If the student wishes to change the DA, this must be consulted with the program director first. After the student has identified and contacted a new DA, they are required to complete the *Request to Change a Committee Member* form (Appendix B).
- If the DA or DR resigns to their position in the program, or as a part of the DC, the student will select another committee member. After reaching an agreement with the

new committee member, the student will file a new DA or DR selection form with the program director's approval. The change is not considered official until this approval is completed.

IV. Dissertation Process

<p>1. Research topic selection</p>	<ul style="list-style-type: none"> • Research topic selection starts with enrollment in the doctoral program, if not before. By proceeding through coursework and participating in workshops during the first year, students are expected to define a specific area of the field they are most interested in, the research questions they'd like to answer, and how the research will be conducted. • It is important to engage in discussions with research professors, faculty members, or investigators that may guide topic delimitation. • The program also encourages the student to get involved in research conducted by the faculty members that may potentially inform the topic selection. Starting with the 2022 incoming class, PhD students are expected to choose their dissertation topic based on their mentor's research area. • Conducting a preliminary literature review and assisting academic conferences during the first year are also encouraged for this purpose. • During the second and third year, students must have identified and recruited a DC for their dissertation. They have the option of recruiting a third member to form part of the committee if this addition is approved by the DC and the program director. After the selection of members, the corresponding form will be completed, and a date will be identified to conduct the <i>Prospectus Approval Meeting (Appendix B: Form 4)</i>.
<p>2. Registration in PSY 8210/PHS 1821, Doctoral Dissertation Proposal</p>	<p>After completing the required basic research courses, the student may register in PSY 8230/PHS 1823- Doctoral Dissertation Proposal and present the proposal during a formal meeting. Upon acceptance of the dissertation prospectus, the committee members will sign the Dissertation Prospectus Meeting Form (Appendix B). Students may register in the proposal course up to 2 times. The Dissertation Advisor, in consultation with the Dissertation Reader, will evaluate the student's performance for the semester, using the Passed (P), Not passed (NP), or In Progress (IP) grading system. Under justifiable circumstances, the program director may consider an additional registration.</p>

<p>3. Registration in PSY 8260/PHS 1826, Doctoral Dissertation</p>	<p>Students are required to be registered in the Doctoral Dissertation Course to continue working on their dissertation. They may register up to 4 semesters in this course.</p> <p>Students who have fulfilled all requirements for the doctoral degree, except their dissertation, will be considered full-time students while registered in Doctoral Dissertation. This registration is allowed for up to 4 semesters. The Dissertation Advisor, in consultation with the Dissertation Reader will evaluate the student's performance for the semester, using the Passed (P), Not passed (NP), or In Progress (IP) grading system</p>
<p>4. Prospectus (Proposal) writing</p>	<ul style="list-style-type: none"> • During the third year, students should have started the document that will provide the basis for writing the first chapter of the dissertation project. • Chapter I Introduction of most dissertations includes the following required information: <ul style="list-style-type: none"> ○ Title ○ Introduction ○ Statement of the Problem and Relevance ○ Purpose of the Study ○ Theoretical Perspective ○ Previous Research studies (i.e., literature review) ○ Hypothesis or Research Questions or Research Objectives • After completing Chapter I, the student is also expected to decide on the general type of methodology to be utilized (see Types of Research). To complete the process, the student will be assisted by the DA or by the research course professor. • Chapter II: Method of most dissertations includes the following required information: <ul style="list-style-type: none"> ○ Type of research design ○ Participants – sample characteristics ○ Recruitment procedures ○ Instruments/Measures ○ General Procedures ○ Data analysis procedure • The major components of Chapter I, the method outline (which will become a part of Chapter II), and a list of references constitute the core of the Dissertation Prospectus.

<p>5. Prospectus Approval Meeting</p>	<ul style="list-style-type: none"> • During the meeting the student will present the Prospectus to the DC. • A general recommendation is to prepare a 10-15 slides Power Point presentation to be presented orally within a 20–30-minute timeframe. This presentation must also include which publication option (Traditional Dissertation Structure or Publication Structure, see below) the student proposes for their dissertation. • After the presentation, the DC members will discuss the information presented in terms of content and research methodology to decide whether the prospectus is sufficient for the student to continue with the dissertation project. • If the committee does not approve the prospectus, a new date will be selected for the second presentation. • The DC will present to the student the specific areas in need of improvement to satisfy the requirements of the program with regards to this component of the dissertation process. <ul style="list-style-type: none"> • If the Prospectus is found to be developed to a satisfactory level, the DC will sign the corresponding form certifying such decision. <i>Our programs require students to have their dissertation prospectus approved before applying for internship.</i>
<p>6. Approval of Prospectus by Institutional Review Board (IRB)</p>	<ul style="list-style-type: none"> • Approval of the Prospectus also allows students and their DA to submit the required forms of the proposal to the Institutional Review Board (IRB) for their review and authorization. • The IRB will inform the DA about the result of their evaluation and provide their recommendations. • If approved by the IRB, the student will be allowed to begin data collection. • Data Collection is expressly forbidden in the absence of IRB approval. • It is important to note that the DA must appear as the Principal Investigator (PI) in IRB documentation.
<p>7. Documentation of Meetings</p>	<ul style="list-style-type: none"> • All meetings related to the dissertation process and all recommendations agreed upon in these meetings must be documented by the student and signed by all participants.
<p>8. Data Collection and Analysis</p>	<ul style="list-style-type: none"> • Upon authorization by the IRB, the student will begin the data collection process. • During this process, students will consult regularly with their Dissertation Advisor. • Minor modifications to the methodology need to be documented and approved by the DA prior to implementation. • Specific and more significant modifications to the methodology that had initially been approved will need to be reassessed to

	determine if a subsequent consultation with the IRB needs to occur.
9. Approval of Final Draft & Public Presentation of Dissertation	<ul style="list-style-type: none"> • Prior to setting a date for the presentation of the final dissertation draft, the student must get preliminary approval of the complete document from each committee member. • The form denominated “<i>Authorization to Schedule Dissertation Presentation</i>” (Appendix B: Form 6) will be completed by the DC and the student to obtain confirmation of the date when the presentation will be made. This will allow the program’s office to schedule the use of a room and to reserve the necessary audiovisual and physical resources needed to facilitate the meeting. • The content of the presentation of the dissertation needs to be discussed and approved by the dissertation committee or with the DA prior to the date of the defense. • Oral defense of the dissertation must be in person. • General public is welcome to attend the dissertation defense. Nevertheless, some rules apply. The audience will be asked to turn off their cellular telephones to prevent unnecessary distractions. No food or beverages are allowed during or after presentations. Children under 12 years will not be allowed during the presentation. • The defense will include a relevant summary of the research process and findings. • The student will have 40 minutes to present their dissertation project. This will be followed first by the committee’s questions, and then the audience will be allowed to ask the student questions about their dissertation project. • After the Q&A section, the DC will retire to deliberate on whether the student’s dissertation project is or not approved. • The corresponding form (Appendix B: Form 7) certifying the committee’s decision must then be filled in and signed by all DC members and the student. The form will be delivered to the Registrar’s Office where the official notation of the outcome of the meeting will be added to the student’s record. • A dissertation may receive one of the following three ratings from the DC: Approved, Approved with Conditions or Not Approved. If the DC cannot come to an agreement, the Program Director will attempt to solve the disagreement. The Program Director may also assign another faculty member to address the issue.
10. Publication of Dissertation	<ul style="list-style-type: none"> • A traditional dissertation document (option 1, below) or an accepted publication manuscript in a peer-reviewed journal

	<p>(option 2, below) are the allowed options (see below, Dissertation Structure).</p> <ul style="list-style-type: none"> • The program also encourages our students to present the results of their studies in a professional convention or meeting such as the Ponce Health Sciences University Scientific Conference and the Convention of the Puerto Rico Psychology Association. • When the student chooses a dissertation topic and elaborates a dissertation problem, he or she becomes the main investigator and the DC members the co- investigators. However, when the student works on a project that has been initiated by a DC member or becomes part of a professor’s research or publication effort already in progress, the student becomes the co- investigator. The student and the DC members are encouraged to decide on this issue before initiating the more advanced components of the process.
--	--

V. Dissertation Structure

The dissertation process for our Clinical Psychology Programs (PsyD/PhD) may result in the publication of the dissertation in a traditional *Dissertation Structure* (Option 1) or a *Scientific Publication Structure* (Option 2). Both options are described below.

Option 1: Traditional Dissertation Structure

Format

The format and style of presentation of all dissertation projects will follow the most recent version of the Publication Manual of the American Psychological Association. No other format will be accepted. Styles guide resources may be found in the following link: <http://www.apastyle.org>.

Item	Check
Spacing: Double-space	<input type="checkbox"/>
Centered-below Romans and Arabic numerals (for dissertations)	<input type="checkbox"/>
1.25" left indentation	<input type="checkbox"/>
Fonts: Times New Roman (12 pts), Arial (11 pts), Calibri (11 pts),	<input type="checkbox"/>
In-text author citations (for more than 3 authors- Johnson et al., 2019)	<input type="checkbox"/>
APA Headings	<input type="checkbox"/>
APA style tables (single spaced)	<input type="checkbox"/>

APA style figures (single spaced)	<input type="checkbox"/>
References	<input type="checkbox"/>

References used

It has become a widespread practice to use internet-based references in elaborating academic projects. Dissertation projects may include information obtained through the internet. However, the number of references from this source may not exceed 10% of all references. This rule intends to ensure that the work presented is mostly based on referred journals, reputable books, and professional primary sources.

Authorship

Any publication done on the dissertation will carry the following authorship information:

- a. The student's name in first place
- b. The DA's name in second place
- c. The DR's name in third place

Authorship in secondary analysis

A student's original hypothesis must drive secondary data analysis. The DA must ensure the *originality of the student approach and scientific rigor* for an existing project dataset analysis. **Important note:** the primary author is the person whose research questions and hypotheses served as the basis for the project presented in the Dissertation.

PsyD program

In the case of Dissertations geared towards the design of Programs, the ownership of the project is to be determined at the beginning of the process. The student together with the DA and the Program Director will stipulate in a document, the agreements reached about who is the Principal Investigator and who holds ownership of the project. Conjoint ownership of a Program is possible with the consent of the PHSU's President and Dean. Therefore, the program might declare the property of the student or of Ponce Health Sciences University, depending upon the expected contribution of the parties involved to the conceptualization and development of the project.

Document organization

Parts	Required	Check
Title/Cover page (not numbered)	Yes	<input type="checkbox"/>
Authorship statement (ii)	Yes	<input type="checkbox"/>
Dissertation Approval letter (iii)	Yes	<input type="checkbox"/>
Dedication (iv)	No	<input type="checkbox"/>
Acknowledgement (v)	No	<input type="checkbox"/>
Table of Contents (vi)	Yes	<input type="checkbox"/>
List of Tables (vii)	If applicable	<input type="checkbox"/>
List of Figures (viii)	If applicable	<input type="checkbox"/>

List of Illustrations (ix)	If applicable	<input type="checkbox"/>
Abstract – this is the last page numbered with small roman numerals (350 words) (x)	Yes	<input type="checkbox"/>

Chapter 1 Introduction		
Parts	Required	Check
Statement of the problem	Yes	<input type="checkbox"/>
Purpose and Justification	Yes	<input type="checkbox"/>
Theoretical perspective	Yes	<input type="checkbox"/>
Previous Research studies (i.e., literature review)	Yes	<input type="checkbox"/>
Research questions or objectives	Yes	<input type="checkbox"/>
Hypotheses	if applicable	<input type="checkbox"/>

Chapter 2 Method		
Parts	Required	Check
Introductory paragraph describing the type of research design	Yes	<input type="checkbox"/>
Participants, sample characteristics, demographics results	Yes	<input type="checkbox"/>
Instruments	Yes	<input type="checkbox"/>
Procedures	Yes	<input type="checkbox"/>
Data analysis procedure	Yes	<input type="checkbox"/>

Chapter 3 Results or Findings		
Parts	Required	Check
Introductory paragraph	Yes	<input type="checkbox"/>
<i>Aim 1</i>	Yes	<input type="checkbox"/>
<i>Aim 2</i>	Yes	<input type="checkbox"/>
<i>Aim 3</i>	Yes	<input type="checkbox"/>

Chapter 4 Discussion		
Parts	Required	Check
Introductory paragraph	Yes	<input type="checkbox"/>
Comparison of results to current knowledge or related scientific literature	Yes	<input type="checkbox"/>
Significance of the study and future implications	Yes	<input type="checkbox"/>
Limitations of the study	Yes	<input type="checkbox"/>
Recommendations	Yes	<input type="checkbox"/>
References	Yes	<input type="checkbox"/>
Appendix IRB Approval Letter	Yes	<input type="checkbox"/>
Appendix Instruments	Yes	<input type="checkbox"/>
Appendix Letters of support*	No	<input type="checkbox"/>

Option 2: Publication Structure

A minimum of one article, in English or Spanish language, and **accepted** in a peer-reviewed journal is required. When the DC and the student discuss and select this option, a timetable that includes the review process from the journal must be considered. It is essential to point out that a journal publication process may take *at least three months*. As the publication process time can vary according to journal, it is recommended to look up the estimated publication time for the desired journal for publication. The DC and the student must contemplate if this option suits their timeframe goals for graduation. If opting for the Publication Structure, the student may include in their defense presentation any past publications achieved before enrolling in the doctoral dissertation course while coursing the doctoral program.

Suggested Journals

A free, peer-reviewed journal with a continuous revision process and approved by the DC is recommended for time purposes. Journals usually have a particular style and format for submission that needs to be considered. It is encouraged that the student and the DA carefully revise the Journal's criteria for submission before the article submission. To identify details of this information, refer to the journal's website "For Author" section. We also recommend exploring the scope of the journal to ensure the study is an adequate fit for the journal. Here is a list of a few journals' suggestions for publications:

Journal	Link
Revista Iberoamericana de Psicología	https://reviberopsicologia.ibero.edu.co/
Revista Caribeña de Psicología	https://revistacaribenadepsicologia.com/index.php/rcp
Revista Salud y Conducta Humana (periodic revision)	http://rsych.com/

Revista Puertorriqueña de Psicología	https://www.repsasppr.net/index.php/reps
Revista Interamericana de Psicología	https://sipsych.org/rip/
Midwest Social Sciences Journal	https://www.iass1.org/midwest-social-sciences-journal
APA Journals	https://www.apa.org/pubs/journals

Format

The format and style of most journals follow the guidelines of the Publication Manual of the American Psychological Association: <https://apastyle.apa.org/>. However, some journals may require other style of citation (e.g., AMA, MLA, Chicago).

Document organization

Usually, journal articles have a word count limitation from 7,000 to 10,000 words (this corresponds to a 20-30 pages double space document). A general outline for most journal articles goes as follows:

- a. Abstract
- b. Key words
- c. Introduction
- d. Methods
- e. Results
- f. Discussion
- g. Conclusion
- h. Acknowledgments
- i. Contributions
- j. Funding

VI. Graduation requirements

Option 1: Dissertation document	<ul style="list-style-type: none"> • All dissertations final manuscripts must be submitted to PHSU library in a CD before applying for graduation. The following information should appear in the CD label: <ul style="list-style-type: none"> ○ PHSU School of Behavioral and Brain Sciences ○ PsyD or PhD Clinical Psychology Program ○ Author's name ○ Date of dissertation approval (month & year)
--	--

<p>Option 2: Journal Publication</p>	<ul style="list-style-type: none"> • The letter of acceptance from the Journal and the final version of the article must be submitted to PHSU library in a CD before applying for graduation. The following information should appear in the CD label: <ul style="list-style-type: none"> ○ PHSU School of Behavioral and Brain Sciences ○ PsyD or PhD Clinical Psychology Program ○ Author's name ○ Date of approval (month & year)

Date of Proposal Meeting:

Date of Form Completion:

Title of Dissertation:

Competency Evaluation	Exceeds Expectations for Competency (3)	Meets Expectations for Competency (2)	Does not Meet Expectations for Competency (1)	Score
Review of the Literature	The review of the literature demonstrates an integrated and high-level mastery of relevant scholarly work and provides a strong and specific foundation for the research conducted. The review reflects current evidence and includes both current and foundational citations. The review is well organized and exhibits an integrated understanding of the relevant literature.	The literature review is sound and balanced, but not exhaustive. Includes both current and foundational citations but may benefit from inclusion of additional sources. The review is organized and follows a logical progression.	The review is missing key pieces of relevant research or includes literature unrelated to the proposed dissertation. Constructs may not be clearly defined. The citations are dated and do not adequately reflect current evidence. The review may be biased towards a particular perspective. The review is disorganized.	
Study Rationale and Conceptualization	Research aims are clearly defined. Provides a compelling rationale for the hypotheses to be tested or aims of the project. Project has potential to contribute to the field. If relevant, hypotheses are well-grounded in the literature and testable.	Research aims are defined but may be somewhat vague. The implications of proposed study are addressed but in need of development. The conceptualization of the proposed study is relatively clear.	Research aims are missing or ill-defined. No rationale is offered, or implications of proposed study are unclear. There is no clear conceptualization or justification offered for the proposed study.	

Methodology	Methods and analytical approach are sufficiently rigorous, well-justified, and appropriate for the project. Description indicates an understanding of the methods, is clear, and includes appropriate psychometric information.	The methodology is basic and, while appropriate, could be more thoroughly developed. The description is enough for the committee to understand and support the project.	The methodology is ill-defined and/or incongruent with the aims of the proposed study.	
Writing	Demonstrates clarity, coherence, logic, and flow in the presentation of content. Strong transitional segues are used to structure the document. Minimal to no errors in syntax, punctuation, and spelling. Negligible number of typographical errors. Follows APA format and consistent with Dissertation Manual guidelines.	The proposal mostly demonstrates coherence, logic, and flow in the presentation of content. Minimal number of syntax, punctuation, and spelling errors. Minimal number of typographical errors; Follows APA format and Dissertation Manual guidelines but may have some errors.	The proposal lacks coherence, logic, and flow in the presentation of content. Numerous errors of syntax, punctuation, and spelling. Excessive typographical errors. Numerous APA format errors. Does not adhere to Dissertation Manual guidelines.	
Presentation	The student is professional and demonstrates competence throughout the meeting. The student is able to describe the study in a manner consistent with a presentation in a professional setting. Student is able to answer questions in a way that demonstrates familiarity with the body of literature and evidence-based thinking.	The student is generally professional in the meeting, but may appear anxious or low in confidence. Student's presentation may be more consistent with a strong classroom presentation rather than a professional conference presentation. Student is largely able to explain the project and answer questions, but may struggle with some pieces. Student appears to understand project, but may at times have trouble communicating it.	The student's presentation fails to demonstrate that they understand the project and/or the relevant body of literature. Student is frequently unable to answer questions, including ones central or specific to the study.	

Proposal Ratings: Scores of Exceeds Expectations for Competency at the proposal indicate that the document is considered strong and will likely need minimal revisions prior to the defense (except for updating as appropriate). Submission of work at a similar level is likely to be acceptable at the defense.

Scores of Meets Expectation for Competency are considered acceptable at the time of proposal. However, the committee may provide feedback on changes that should be made prior to the defense. Submission of the document at the same level of work may not be considered acceptable at the defense.

Scores of Does not Meet Expectations for Competency indicate that the current work is not at a level that is acceptable. The committee will provide feedback on the next steps. This may range

from revisions that need to be made for the current work to at an acceptable level to rejection of the project. Committee will indicate in the meeting outcome form.

The Dissertation Committee met on the date listed above to evaluate the Dissertation Prospectus/Presentation Meeting presented by the above-mentioned student. After reading the document, listening to the presentation, and discussing the project presented by the student, the ratings above were provided. To approve, students are expected to obtain a minimum score of 2 in each of the areas evaluated.

FINAL EVALUATION OF DISSERTATION PROCESS AND PUBLIC PRESENTATION

FORM #7

Student: _____

Date: _____

Dissertation Title:

The members of the Dissertation Committee have met with the above named student to hear and to evaluate the “Public Presentation of Dissertation” according to the norms set forth in the Dissertation Manual of the Ph.D. Clinical Psychology Program. Based upon the quality of the work submitted and the presentation made today the Dissertation Committee finds:

The dissertation submitted, and the presentation done on the final draft are **not consonant** with the norms of the program and/or the agreements reached by the candidate with the Dissertation Committee. **Not Approved**

The dissertation submitted, and the presentation done on the final draft are consonant with the standards of the program and with the expectations of the Dissertation Committee however, modifications need to be done before final approval is granted. **Approved on Condition.**

The dissertation submitted, and the presentation done on the final draft are **consonant** with the standards of the program and with the agreements reached between the student and the Dissertation Committee. **Approved.**

SCHOOL OF BEHAVIORAL AND BRAIN SCIENCES

Date of approval (MONTH & YEAR)

APPENDIX E

Suggested Guidelines for Traditional Dissertation Structure

Quantitative Method Design Format

- Chapter I: Introduction Statement of the
Problem
Purpose & Justification of the Study
Theoretical Perspective
Previous Research Studies (i.e., literature review) Hypothesis
- Chapter II: Method
Type of research design
Participants – sample characteristics
Instruments/Measures
Procedures
Data analysis procedure
- Chapter III: Results
- Chapter IV: Discussion
Discussion of each hypothesis
Significance of the study and future implications
Limitations of the study
Recommendations

Qualitative Method Design Format

Chapter I: Introduction Statement of the

Problem

Purpose & Justification of the Study

Theoretical Perspective

Previous Research Studies (i.e., literature review)

Research questions or objectives

Chapter II: Method

Qualitative Research Strategy

Reflexivity/Role of the Researcher

Participants/Elements

Data Collection Procedures

Data Analysis Procedures

Chapter III: Results or Findings

Chapter IV: Discussion

Discussion of each research question or objective

Significance of the study and future implications

Limitations of the study

Recommendations

Mixed Methods Design Format

- Chapter I: Introduction Statement of the
Problem
Purpose & Justification of the Study
Theoretical Perspective
 Previous Research Studies (i.e., literature review)
Research questions or objectives
- Chapter II: Method
Type of mixed method research design
Rationale for Mixing Methods
Reflexivity/role of the Researcher
Participants
Instruments/Measures
Procedures
Data analysis procedure
- Chapter III: Results
- Chapter IV: Discussion
Discussion of each research question or objective
Significance of the study and future implications
Limitations of the Study
Recommendations

Program Development Format

Chapter I: Introduction

- Statement of the Problem and Relevance
- Conceptual Framework
- Literature Review
- Definition of Terms

Chapter II: Method

- Needs Assessment:
 - Participants – sample characteristics
 - Instruments/Measures
 - Procedures
 - Data analysis procedure

Chapter III: Results

Chapter IV: Program Design

- Purpose of the Program
- Vision and Mission of the Program
- Objectives of the Program
- Participants of the Program
 - Inclusion/Exclusion Criteria
 - Geographic Area
- Social Benefit
- Proposed Method of Program Evaluation
 - Clinical and administrative
- Contribution and Future Implications

Case Study Format

I. Introduction

- Statement of the Problem and Relevance
- Purpose of the Study
- Case Study Questions or Aims
- Definition of Terms
- Literature Review about the Case Problem
- Theoretical Perspective of the Study

II. Method

- Design (Case Study Type)
- Source of Information (Participant, files, archives, etc.)
- Data Collection Strategies (Observation, Interviews, Field Notes, etc.)
- Recording Strategies (Audio, video, photos, transcripts, etc.)
- Role of the Researcher
- Ethical Issues
- Unit of Analysis (Categories)

III. Findings

IV. Discussion

- Significance of the Study
- Theoretical and Practical Implications
- Study Strengths and Limitations

APPENDIX J

Dissertation Checklist

Complete these steps before submitting the dissertation to the Graduate School for approval:

- Check the spelling on the title page.
- Have you listed your degree properly?
- Is the approval form signed by your dissertation chair, all committee members, and your department head or school director/COT dean?
- Does the abstract have no more than 350 words?
- Is there a 1.25" left-hand margin and at least 1" margins on the right, top, and bottom of each page? It can be 1" if you will not have the document bound as a book.
- Have you run a spell and grammar check?
- Are the levels of headings, correct?
- Do all headings and page numbers in the table of contents match those in the text exactly?
- Are all sources listed in the references list (or works cited) mentioned in the text?
- Are all citations in the text listed in the reference list (or works cited)? Double check alphabetization.
- If the dissertation involved research using human or animal subjects, did you include a copy of your IRB approval letter?
- Did you receive authorization for use of published material that is not covered under fair use?
